

PRESS INFORMATION

Kings Park go “Smart” with Groundbreaker

When 180 privately owned properties managed by Kings Park Management with private water mains and services (bulk water supply by South East Water) required a “smart” metering system to manage and produce their own direct billing to occupants, the obvious choice for meter housing was the Groundbreaker water management system.

Whilst avoiding inconvenient and expensive excavations in private properties, the Groundbreaker water system neatly houses external meters with capacity for smart meters, and because the Sensus meters and associated AMR facility are above ground, the “Water Spy” system installed by Meter Technology Solutions Ltd was selected. Thus ensuring with local data collection from a fixed single point within the site, data is available to site management at all times.

The Groundbreaker system was installed by principal contractors CPI Moling of Bognor Regis, Managing Director Mike Cooke said “the combination of Groundbreaker and Smart metering has enabled us to complete the project in record time with minimal disruption to occupants”

Said a spokesman for Kings Park ‘*The Residents of Kings Park are very pleased with the neat appearance of the Ground Breaker boxes and the ease of turning their water supply off no more hands and knees trying to find the stop cock cover in the grass. Kings Park Management Co Ltd would like to thank all the contractors and suppliers who were involved in this Large Project for us all the materials and workmanship have proven to be of very high standard*”
