

Taking the lead on lead?

In 2013 the EU will reduce the permissible amount of lead in drinking water. 'Traditional' treatments are not necessarily sustainable. The only totally secure way to reduce lead is to remove or replace the lead pipe.

- **Would you like to cut the time taken to replace a lead pipe to a couple of hours or less?**
- **Use INSUduct™ to deliver water to where it's wanted**
- **Can be used with Groundbreaker® to measure water and locate a Smart meter**
- **Cut time, cut cost**
